

Nancy Drummy grew up in Minneapolis, MN and received her B.S. degree in Agronomy and Plant Genetics from the University of Minnesota. After completing college she worked as an agronomist in seed corn production in central Minnesota. She later moved to Wisconsin to work for Land O' Lakes Cooperatives. Here she worked as a Field Agronomist serving the farmer customers in Sturgeon Bay, Kewaunee, and Seymour, WI, and later went on to become a District Sales Agronomist serving all the Land O' Lakes cooperatives in NE Wisconsin and the Upper Peninsula. She also spent three years as a District Sales Manager for a seed corn company establishing farmer dealers in NE Wisconsin before joining UW-Extension in 1991. In her position with UW-Extension she served as the Watershed Educator with the Beaver Dam River Priority Watershed Project. Her program emphasis was on nutrient management and conservation tillage.

Nancy began working with Discovery Farms in March 2004 with one of Discovery Farms special projects. Nancy's work on this project has been centered on the "Nutrient Management Farmer Training Program." She is also involved with the research that is being conducted on the Koepke Farm, located near Oconomowoc. Currently Discovery Farms has two tile line monitoring stations and one surface water monitoring station on the Koepke farm.

Nancy lives in Waupun, WI with her husband Neil. Together they farm 600 acres of corn, soybeans, wheat, and canning crops.
