

Susan Frame joined the Discovery Farms staff in 2004 working on data collection. Her job encompasses organizing data coming from the Discovery Farms. The different types of data are crop information on fields, runoff events from USGS, and concentration data on those events from UW-SP. She also works to link the data to interactive maps of the Discovery Farms using GIS. Any requests for data from others outside Discovery Farms are streamlined through Susan. She helps staff with maps, graphs and charts for different presentations they are delivering.

She grew up on a Guernsey farm in Minnesota and graduated from UW-River Falls. She recently completed a GIS degree at Chippewa Valley Technical College. She keeps busy with her husband and 2 boys on their hobby farm raising beef cows and llamas. Her favorite activity is weaving and teaching weaving to others.
